

Blow-off Cleaning Stations

The safer choice for personnel de-dusting and clean-down operations

The JetBlack cleaning station is an easy-to-use alternative to compressed air that offers organisations peace of mind and users a completely safe solution for personnel de-dusting and blow-down operations.

Compressed air has the potential to be very dangerous, even fatal if misused, particularly if it comes into direct contact with bare and exposed skin. Installing an a Cleaning Station allows all employees to safely 'clean down' without putting themselves or work colleagues into any danger.

The JetBlack Safety Cleaning Station is a simple, yet very effective, plug and play tool, suitable for any manufacturing or production facility where workers need to quickly clean-down.

Why is the Cleaning Station safer to use than compressed air?

- **SAFER**

The Cleaning Station produces high volume, low pressure air (<200mbar) which poses no threat to the operator's safety. The design is also OSHA compliant.

- **COST EFFECTIVE**

Blower-powered air produced by the Cleaning Station costs upwards of 90% less than the equivalent compressed air generation.

- **LOW NOISE EMISSIONS**

With levels below 78dB(A), the Cleaning Station is typically quieter than most compressed air nozzle arrangements.

Blow-off Cleaning Stations

The Cleaning Stations are available in a number of configurations:

Wall Mounted:

- Designed for positioning at any exit/entry point of manufacturing and production facilities or work shops
- Constructed from high grade plastics, the Cleaning Station is designed to operate reliably even within the toughest environments
- Touch button for pre-timed on/off operation
- 115V and 230V, 50/60Hz units available from stock
- Robust hose allows for full body de-dusting (1.42m)
- Produces high volume, low pressure air
- Easily maintained (filter change every 3 months)
- Stainless steel rain cover available for outdoor use

Portable Unit:

- Designed for component cleaning and/or work space cleaning applications
- Robust hose supplied (2.44m)
- 115V and 230V, 50/60Hz units available from stock
- Easy to carry – weighs less than 7Kgs
- Further option includes a static neutralisation emitter pack. This allows the airflow to be ionised and therefore capable of eliminating any surface static charge

Typical JetBlack Applications include:

- Quarrying / Stone / Aggregate
- Plastic and rubber production
- Cement and plasterboard manufacturing
- Paper and tissue production
- Carpet and general textile manufacturing
