

- Low-noise design
- Easy to maintain
- Quickly adjustable
- Easy integration in existing production lines
- Adaptable to your specific needs and requirements
- Energy efficient

The drying solutions of Ronair® consist of a combination of air knives and patented drying plates with special grooves, used to remove water from packing material in the most efficient way.

Whatever the shape or material of the product, our solutions eliminate the water drops

A variety of different packaging materials can be dried such as: small and medium sized bags, cups, yogurt containers, dessert cups, ready made meals...

Up to 99% of the water is removed!

Some test results using the Ronair Drying Technology

Product	Percentage removed water (average of 2 measurements)
 Can of sardines	99,90%
 Can of dog food	98,15%
 Jars of jam	94,69%
 Can of cocktail sausages	96,76%
 Prepared meal in tray	99,51%
 Pack of sausages	99,74%
 Lid of box of baby powder	93,39%
 Vacuum packed meat	94,67%

All the measurements are done in our internal specialized lab

Send us your product as well

Feel free to contact us if you would like us to conduct drying tests on your product as well. Based on the test results, we will identify the most efficient and durable solution to your drying problem.

With our expertise and extensive technical know-how, we can ensure that the RONAIR drying solution will also be perfectly integrated into your production line.
